

Nancy Jones
Principal

For Nancy Jones, design is a form of alchemy, in which possibilities are translated into inspired and purposeful solutions. She sees interior spaces as structures in which people work and live, and each project as an opportunity to integrate elegance and effectiveness, creating a distinctive design that is commensurate with the client's overarching vision.

An insightful, confident, and experienced design leader, Nancy works effectively with people at all levels within a client's organization. Framing a series of questions for the client and the project's users, she finds specific focal points for the project and builds pivotal components around them. The result of this design approach is a clear hierarchy of space that creates pathways for movement and energy, enabling all who visit, live, or work in the space.

As a Principal at Millican Jones, Nancy brings her design knowledge and expertise to the multifaceted work of healthcare, creating positive, memorable experiences for patients, visitors, and staff.

Nancy has years of experience leading design in collaborative environments, working within interior design and architecture firms and with a wide variety of clients and consultants. Her projects range from the new Replacement Hospital for El Camino Hospital (Mountain View CA) to the design of more than eight million square feet of workplaces. In addition, she has experience with the design of residential and hospitality interiors, including a luxury hotel built to house the visitors and athletes attending the Asian Games in Jakarta.

Her projects have earned five prestigious Best of Year Awards from Interior Design magazine, an Honor Award for Architecture from AIA San Francisco/San Francisco Business Times, and design awards from Contract Design and Hospitality Design magazines.

Nancy received her Bachelor of Fine Arts Degree from the University of California at Los Angeles and continued her study of Interior Design at Woodbury University. As an adjunct to her design work, she has pursued independent studies in psychology and cognitive science, and she is also an accomplished sculptor.
